Vulnerability Identification Tool

VULNIT Products Data Sheet

Enabling simple & effective IT security self-checking

VULNIT, French leader in IT security testing software, brings a set of products and the methodology to help you to assess your risks and improve your IT security.

Key Advantages

Scalability

VULNIT provides 3 products matching your requirements and your usage: the virtual appliance and the USB key for internal security and the SaaS solution for out-facing security. Besides, the exclusive USB key enables portable and quick-win IT security testing.

Functional coverage

The software addresses a wide range of IT security vulnerabilities.

Two dedicated testing consoles provide a deeper point of view on your wifi and file sharing security.

Accessibility

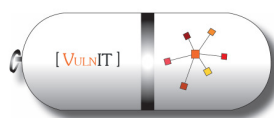

- The software is technically accessible to non-expert users.
- The VULNIT methodology helps our customers to implement a IT security improvement process.
- The progressive prices make the VULNIT solution accessible to companies of any size and any industry.

Wide range of IT security issues:

- Patch management on OS, DBMS, Web, applications,
- Website dev (SQLi, XSS, RFI/LFI, etc),
- DBMS (Oracle, SQL Server, MySQL...),
- Network protocols (FTP, SNMP, SMTP, etc),
- Windows file sharing,
- Wifi.

3 products to match your business requirements

USB key

- Portable
- Multi-users
- Quick-win

Virtual appliance

- Automatic
- Multi-sites
- Scalable

SaaS

- Automatic
- Out-facing security

VULNIT Products Data Sheet

Product specifications

VULNIT Virtual Appliance

The virtual appliance is provided as a OVF/OVA file which is natively compatible with:

- VMware ESX v4.0 or later,
- Oracle VirtualBox v4.0 or later.

It can also be imported in:

- VMware server (using ovftool),
- Citrix Xen (using XenConvert),
- Microsoft Hyper-V (using Citrix Kensho utility).

The virtual appliance requires:

- RAM: 512 MB minimum (1 to 2 GB recommended),
- Disk: 2 GB of storage,
- Internet connection for updates.

VULNIT USB Key

The USB key is compatible with any desktop or laptop which is able to boot on a USB device.

If not, check the Support section on our website.

VULNIT SaaS

The SaaS version of our software is accessible online, so a simple Internet connection is required.

Wide security coverage

The tests performed by VULNIT address the major concerns of your IT security:

Patch management, on OS (Windows/Unix), databases, web servers and applications,

Websites. SQL injection, Cross-Site Scripting (XSS), File Inclusion (LFI/RFI) and authentication (by dictionary), as well as Full-Path Disclosure (FPD) and other information leakage,

Databases. Authentication tests on 5 flavors of technologies (SQL Server, Oracle, MySQL, DB2 Unix/Windows and PostgreSQL),

File sharing. A dedicated console for Windows shares authentication testing,

Remote access. Authentication tests on SSH and Telnet,

Wifi. A dedicated wifi sniffing console (only available on the USB key),

Simple network protocols. A set of tests on emailing (open mail relay), SNMP (read/write communities), FTP (authenticated access), SSL (insufficient encryption), etc.

Portable testing tool

The VULNIT USB key provides a portable solution which can be used to get a quick-win point of view of your IT security.

This solution requires no installation, either hardware or software.

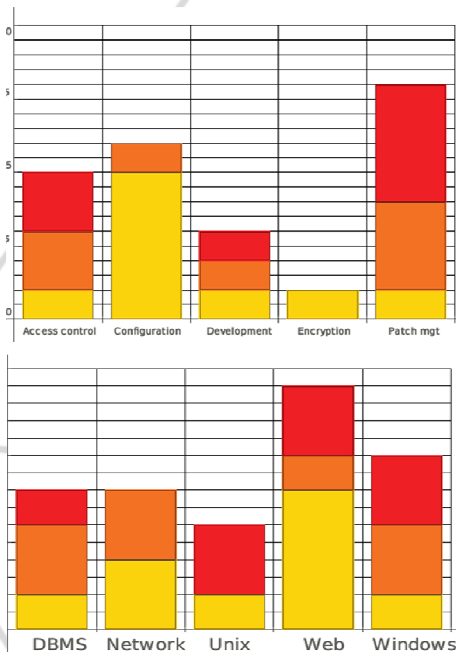

Automation

The VULNIT virtual appliance can be deployed to multi-site environments using light agents. These agents are managed by the virtual appliance which consolidates their results.

The testing tasks can be scheduled in order to automate your IT security supervision.

Reporting

The dashboards and reports show the vulnerabilities prioritized and classified, in order to provide IT management with the most efficient and accurate vision of the security controls in place.

Exports

VULNIT enables users to export the network inventories and the list of vulnerabilities which may be discovered by the tests.

VULNIT offers multiple export formats:

- **CSV** (compatible with Microsoft Excel) for table formatting, follow-up and charting,
- **PDF**. This read-only format is stamped, so that the software use may be delegated to stakeholders,
- **MHT** (compatible with Microsoft Word and Web editors). This report format uses the same layout as the PDF report and can be modified using web editors.
